DETAILED ACTION

1. Applicant's cooperation is requested in correcting any error of which applicant may become aware in the specification.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

3. The information disclosure statement submitted on 12/29/2004, and 07/26/2005, have been considered by the examiner and made of record. See attached form PTO-1449.

Drawings

4. Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required

corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 6, 8, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by FUJITA (6,304,709 B1).

The Fujita reference discloses in figure 1, a variable optical attenuator that attenuates light injected from an optical transmission channel (11, 12) for input and outputs the light into an optical transmission channel for output and that can adjust optical attenuation, wherein the optical transmission channel for input, the optical transmission channel for output, light reflection surfaces (31) that reflect light emitted from the optical transmission channel for output, and an actuator that moves all or part of the light reflection surfaces relatively and straightly to at least one of the optical transmission channel for input or the optical transmission channel for output.

With regard to claims 1, 6, 8, and 9, the Fujita reference discloses all the claimed invention.

Allowable Subject Matter

6. Claims 2-5, and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The Fujita reference does not disclose the limitations of claims 2-5, and 7.
